Subject: CDPHE Water Sample Results

From the Durango Herald:

The latest samples taken a couple of days ago from the Animas River and analyzed by the Colorado Department of Public Health and Environment show the river has returned to pre-event levels as far as metal content, said Dr. Larry Wolk, executive director and chief medical officer of the CDPHE.

The announcement was made Tuesday on a tour with Gov. John Hickenlooper of the river and fish hatchery in Durango.

Perhaps you and others could reopen the Animas for recreational use? The rafting companies are taking a real beating.
